October 15, 2014

Dear Sir or Madam

I am currently completing a fifth, and final, year of higher education in computer science at Bordeaux graduate school of engineering in France (Master of Science equivalent). I have studied all aspects of computer science including theoretical and technical foundations of computing, but also project management for two years. For my last semester I am studying "software engineering for networks and telecommunications". Concretely we study wearable devices and the internet of things.

Unfortunately I am not a genius so I have learned to work hard in order to always reach my goals. I would describe myself as a creative and motivated problem solver. During my studies I have learned many technical things, but I would say the non-technical are more valuable to me. Indeed, I discovered how to learn, to be efficient and independent when it is needed or to work in team whenever it is possible.

I will graduate next fall and my semester ends in January. That is why I am looking for my final internship which must last six months and can start in February.

In regard to my legal eligibility to train with your organization, I would be participating in the J-1 Visa Internship USA program, sponsored by the Council on International Educational Exchange [CIEE]. As my sponsor, CIEE is authorized by the U.S. government to issue the necessary documentation for me to obtain a J-1 visa, which allows me to train legally in the U.S for up to 12 months.

I look forward to hearing from you soon and can be reached at +3.369.588.1292 or via email.

Sincerely,

Jérémie Foucault
